Price: Rs. 3495.

ISBN: 978-93-91383459.

Publication Year: 2023.

Pages: 374, Binding: HARDBOUND

Immunology is a fast growing subject. In the recent COVID time, everyone has become familiar with the terms like immunity and immune system. But to understand the subject Immunology is not very easy. The subject is taught at undergraduate and post graduate levels to the students of life sciences and medicine. Several books are available on the subjects by Indian and a foreign writers but there was always a need for a book which could help the students to understand the basic concept of immunology in a simple form. The present book under review will fulfill this gap. The book has 20 chapters and covers the syllabus of most of the Indian Universities and covers all the basic concepts of the subject. Each chapters begins with the introduction of the chapter and material has been presented in the form of short paragraphs and bullet forms which not only makes the book attractive but will also be helpful for the students for their examination point of view.

The book contains a large number of simple and well labeled illustrations which students can easily draw and understand. These simple diagrams will really help the students to grasp the subject. 'Important Points to Remember' given at the end of each chapter summarize all the key points of the chapter for ready reference. Multiple Choice Questions with their answers have also been included in the book. MCQ may also be useful for the competitive examination. List of abbreviations and a comprehensive Glossary of the important terms are also given at the beginning of the book. The author has made every effort to make the book valuable for the students. Though the price of the book is a little bit high but the paper and print qualities are very good. In my view 'Illustrated Immunology' will be heartily welcomed by the students and by all those who are interested in the subject.
